ITP292-02 Team 2

## Introduction

- E-commerce app that allows users to buy, sell or loan stuff
- Pre-order food to skip the queue and do it the technological way
- In this fast-paced world, people are too busy and do not have the time to personally go down to shopping malls to buy, so we want to make it **convenient** for users to shop. Also, crowded stores never create a pleasant experience for the people who shop.

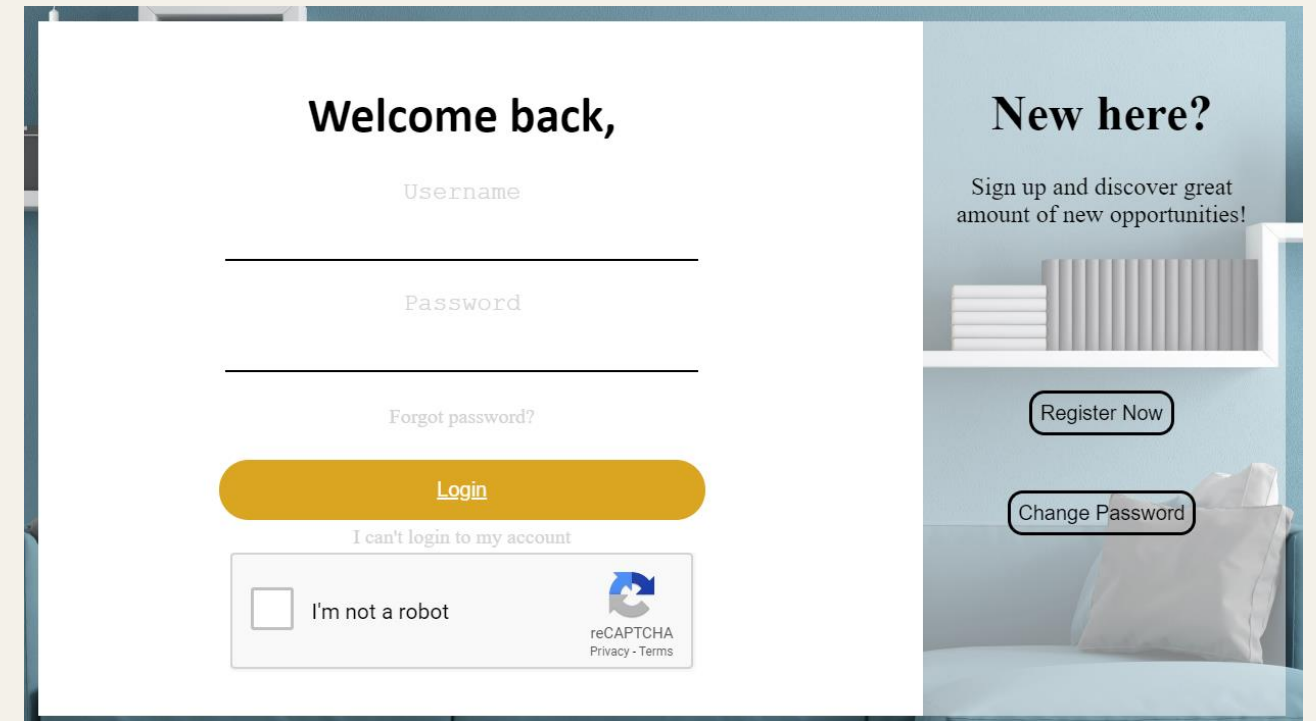

## Background

Nowadays, there are also a lot of expensive gadgets and equipment that many would think twice to buy for one-time uses. Therefore, instead of buying it, it would be cheaper if they were to **borrow/rent** it.

Busy people, as we have noted through interviews and observations, have little to no time to queue for food as well, which we personally as students understand very well. Existing food delivery services are also expensive as they include delivery charges

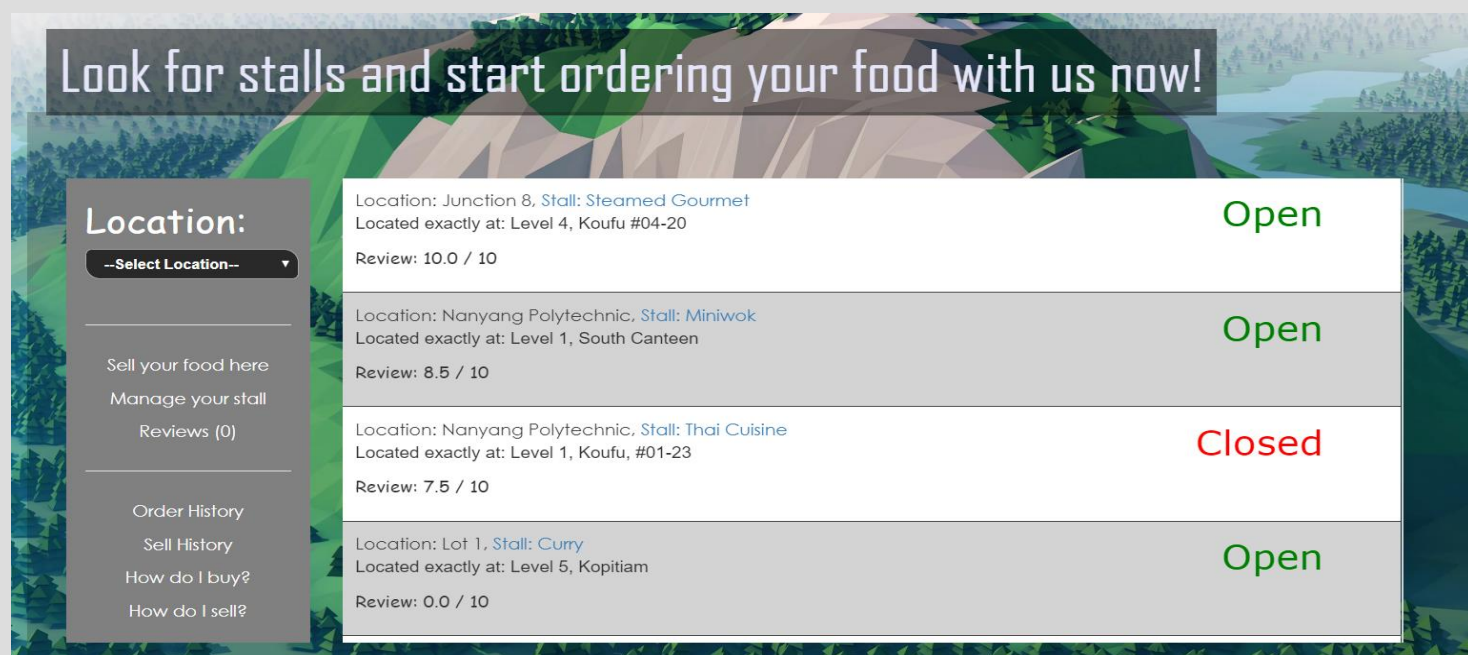

## Login

Forgot Password, Change Password, Re-captcha are included for safe and secure login/account management

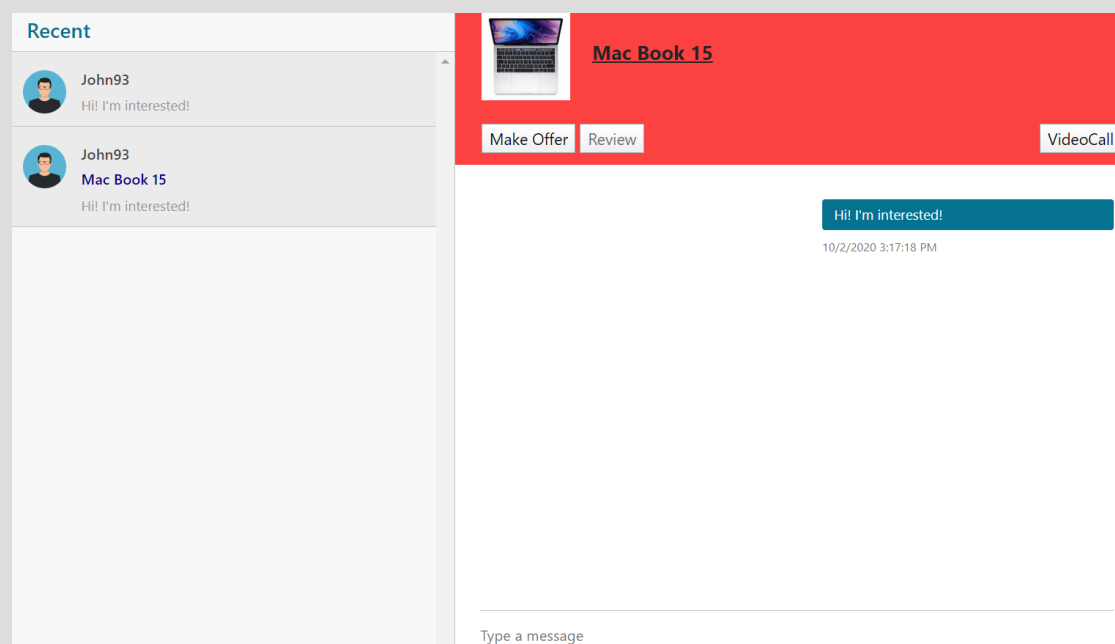

## Business Functions

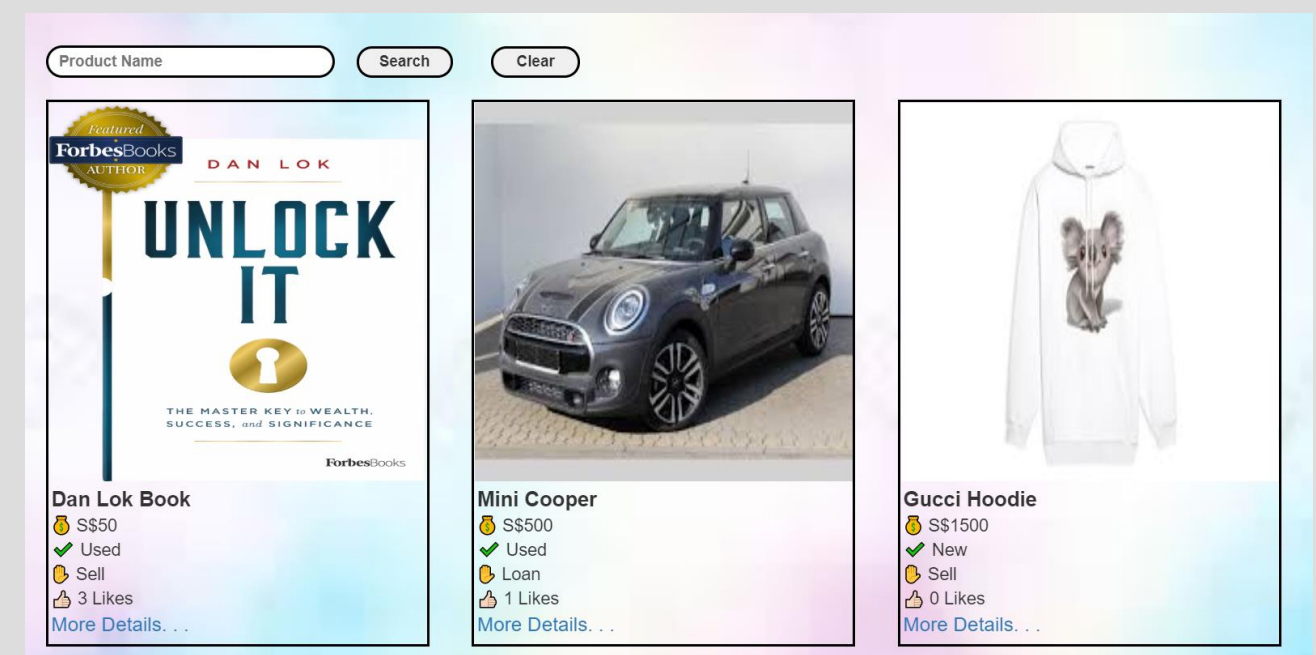

**Pre-order food** that allows users to order food through our website; skipping the queue in real-life

**Chat** that enables users to make deals and meetups plans

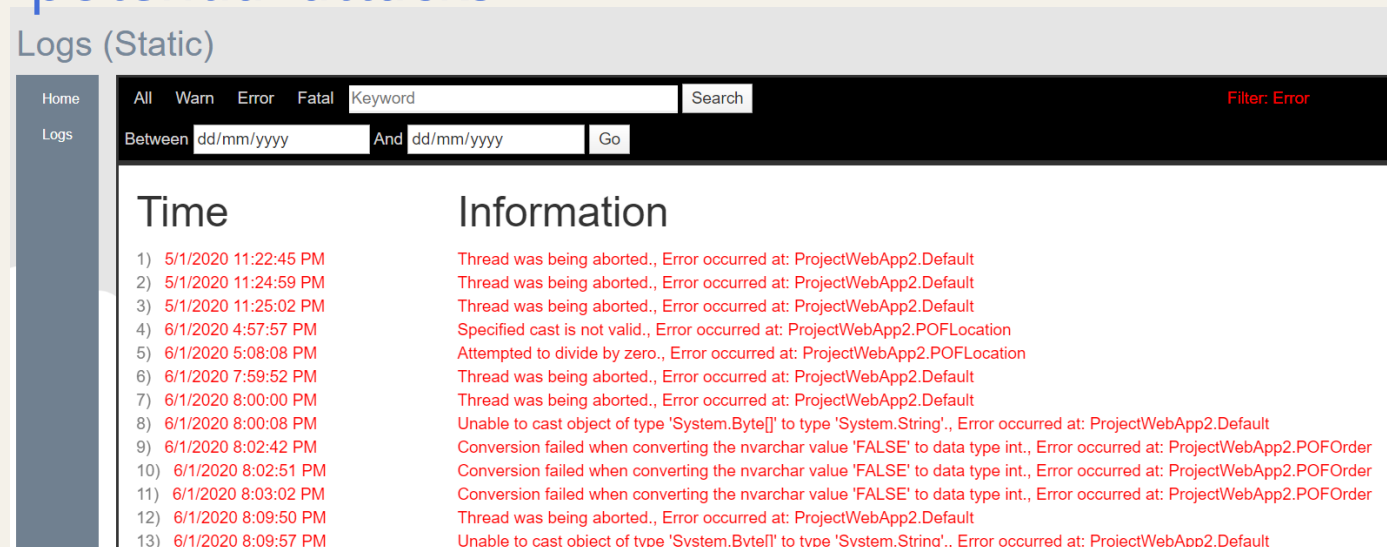

**Shop** to allow users to review and list their products

## Security Features

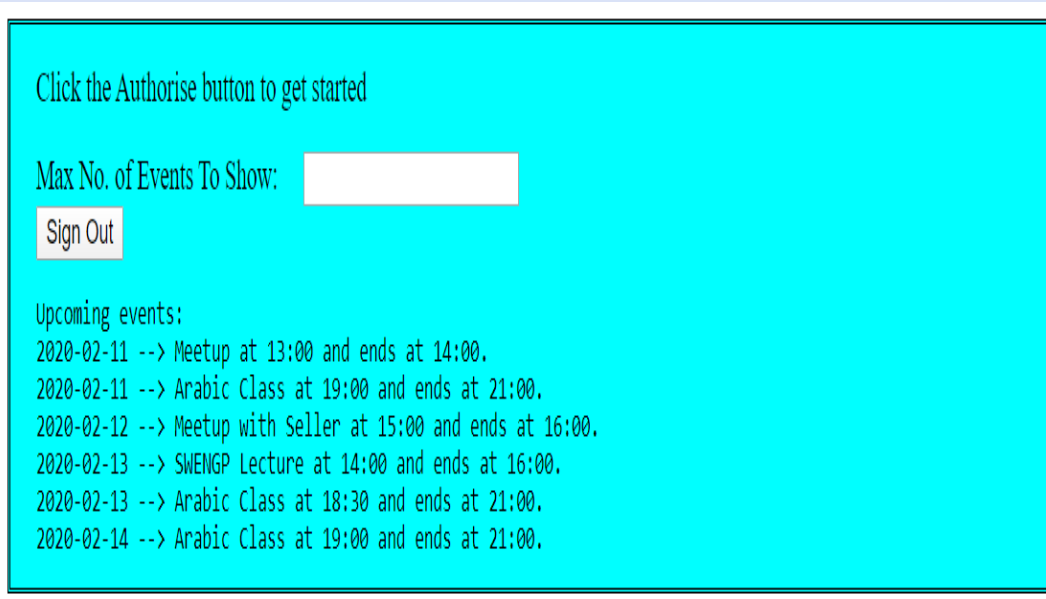

- Input Validation**
- Database Security**
- Secure login and account management**

**Audit log** to view web app activity, including errors and potential attacks

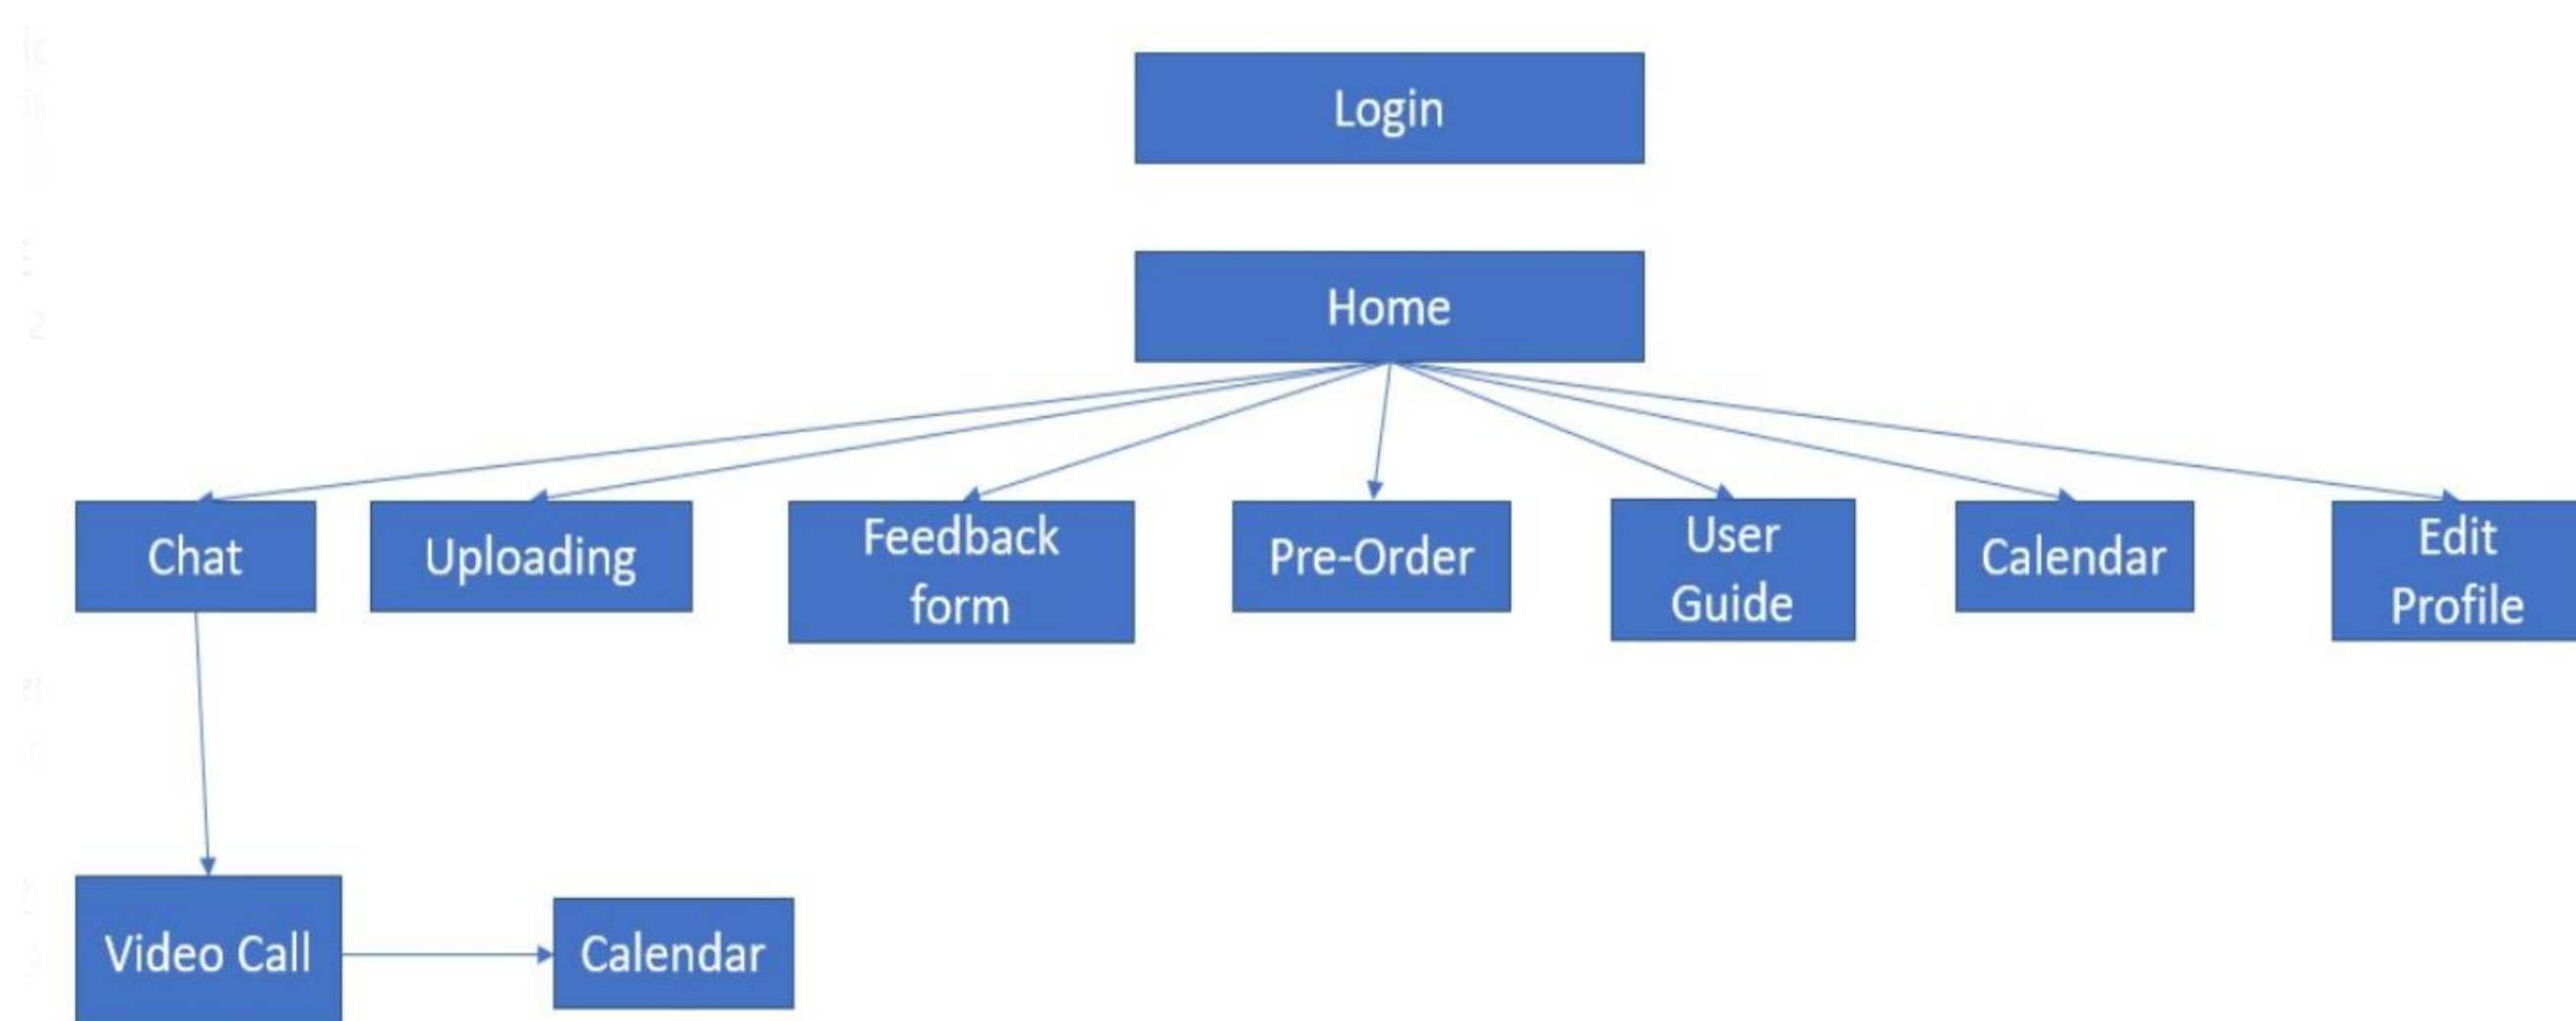

## Business Functions (cont.)

**Calendar** to allow users to view their upcoming events and schedule more feasible meetups

**Video Call** to allow sellers to display their products in real-time for reliability
